

UJENZI WA KIDUMU MCHILIZI

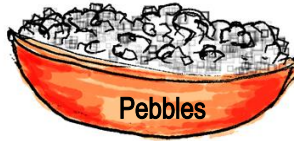

(2) pieces of 2m wood
(2) Straight Tree Plants

Tools for digging

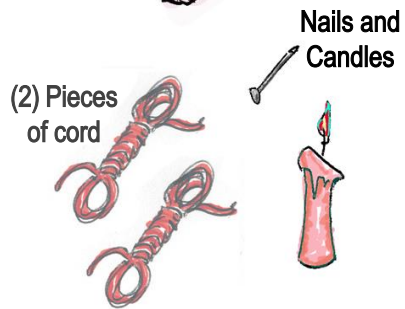

Water Container

Pebbles

Soap

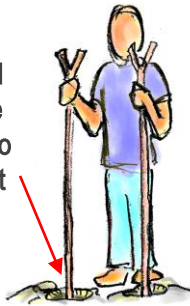

(2) Pieces of cord

Nails and Candles

1. Dig two pits 18 inches deep and 2 feet apart.

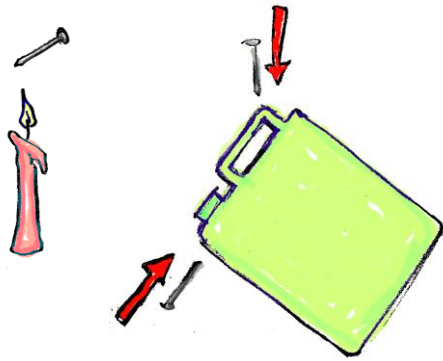

Spray dirty oil on tree trunks to prevent ants.

2. Set trees in the hole, making sure they fit.

3. Place soil and pebbles in holes and press hard.

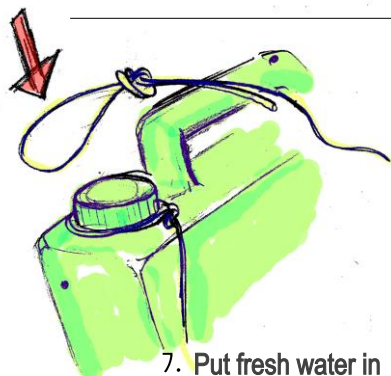

4. Insert the nail into the water container to pierce.

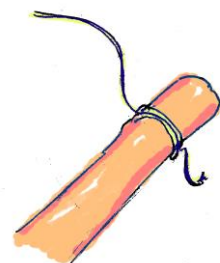

5. Place the nail into the soap to pierce and thread a cord through.

6. Hang the soap on the wood and put it on the stand.

7. Put fresh water in the container and attach the cord to it.

8. Tie the other end of the cord to a stick in order to step on it.

9. Place pebbles in the center of the trees to prevent mud.
